

Dedicated Training on The Social Aspects of Sustainability

**Kalinga Institute of Industrial Technology (KIIT)
Deemed to be University, Bhubaneswar**

Dedicated training on the social aspects of sustainability 2024-2025

Here at KIIT Deemed to be University, we offer dedicated training on the social aspects of sustainability in a few keyways:

- **Dedicated Courses:** We have specific courses within various departments that focus directly on social aspects of sustainability. These courses cover topics like social justice, equity, community engagement, and the impact of sustainability on different social groups.
- **Integrated Learning:** Sustainability principles, including social aspects, are integrated into many of our existing courses across different disciplines. For instance, in an engineering course, you might explore the social impact of a particular technology, or in a business course, you might examine sustainable business practices that consider social equity.
- **Minors or Certificates:** We offer minors or certificates in sustainability that specifically address social aspects. These programs provide students with a more in-depth understanding of these crucial issues.
- **Guest Lectures and Workshops:** We regularly invite speakers and conduct workshops focused on the social aspects of sustainability. These events bring in external expertise and provide students with a platform to engage with these issues directly.

By incorporating social aspects of sustainability throughout our curriculum, we ensure our students graduate with a well-rounded understanding of this critical issue.

In addition to the ways we train students on the social aspects of sustainability, KIIT University also offers a range of programs that equip individuals with practical skills for various in-demand fields.

Here's a breakdown of some of these valuable offerings:

- **Area of Basic Skill Training:** This program provides training in essential skills for income generation in areas like food processing, composite farming, house cleaning product development, pisciculture (fish farming), animal husbandry, mineral water production, healthcare and multipurpose worker roles, and maintenance management & condition monitoring.
- **Pradhan Mantri Kaushal Vikas Yojana (PMKVY) Skill Development Training Program in Green Car Technology and Maintenance:** This government-backed initiative focuses on

training individuals in the repair and upkeep of eco-friendly vehicles, aligning with sustainable transportation practices.

- **Short Term Skill Development Training Programme for Participants from Bhutan in Post Harvest Technology:** This program, supported by the Royal Government of Bhutan, equips participants with the skills to minimize food spoilage and optimize post-harvest processes, contributing to a more sustainable food system.

By providing these diverse programs, KIIT University empowers individuals to contribute to a more sustainable future, both through social awareness and practical skills development.
